WHY WOULD WE SAVE TREES?

We need trees for a variety of reasons, not least of which is that they absorb not only the carbon dioxide that we exhale, but also the heat-trapping greenhouse gases that human activities emit. As those gases enter the atmosphere, global warming increases, a trend scientists now prefer to call climate change. Tropical tree cover alone can provide 23 percent of the climate mitigation needed over the next decade to meet goals set in the Paris Agreement in 2015, according to one estimate.

In terms of climate change, cutting trees both adds carbon dioxide to the air and removes the ability to absorb existing carbon dioxide. If tropical deforestation were a country, according to the World Resources Institute, it would rank third in carbon dioxide-equivalent emissions, behind China and the U.S.

THE ANSWER IS:

In order to protect the Planet, we need trees. At the Global Chamber of Business Leaders, we are aware that there is no science behind climate changes and there is only one planet we all have. We need to save our only planet.

CLIMATE CHANGE COMMITTEE

GLOBAL CHAMBER OF BUSINESS LEADERS

CLIMATE CHANGE COMMITTEE

Climate change refers to long-term shifts in temperatures and weather patterns. These shifts may be natural, such as through variations in the solar cycle. But since the 1800s, human activities have been the main driver of climate change, primarily due to burning fossil fuels like coal, oil and gas.

The Committee on Climate Change was formed in response to the increasingly threatening consequences of climate change. The committee has the task of monitoring global events related to this urgent topic and, together with experts and the interested public, also addresses problems and offers solutions.
