It is Not Nature That is Here Because of Us, We Are Standing Here Because of Nature. WHY WOULD WE SAVE TREES?

We need trees for a variety of reasons, not least of which is that they absorb not only the carbon dioxide that we exhale, but also the heat-trapping greenhouse gases that human activities emit. As those gases enter the atmosphere, global warming increases, a trend scientists now prefer to call climate change. Tropical tree cover alone can provide 23 percent of the climate mitigation needed over the next decade to meet goals set in the Paris Agreement in 2015, according to one estimate.

In terms of climate change, cutting trees both adds carbon dioxide to the air and removes the ability to absorb existing carbon dioxide. If tropical deforestation were a country, according to the World Resources Institute, it would rank third in carbon dioxide-equivalent emissions, behind China and the United States of America.

THE ANSWER IS:

In order to protect the Planet, we need trees. At the Global Chamber of Business Leaders, we are aware that there is no science behind climate changes and there is only one planet we all have. We need to save our one and only planet.
